Heating, comfort and reliable solutions

# Product Selection Guide

## 2022

[installer.danfoss.co.uk](http://installer.danfoss.co.uk)

# It's all about **energy** efficiency

A boiler in a house with individual room temperature controls will be in condensing mode for over 80% of the time it is operating, while the same boiler without temperature controls would be in condensing mode for as little as 5% of its operation.

Source: Tests by Salford University

## TPOne & TP5001 Range Programmable Room Thermostat

### TPOne™

TPOne delivers new levels of user friendly interaction, the large backlit display uses easy to read icons and text information to provide feedback on status and settings to the installer and user. Users can choose 24 hour, 5/2 day or 7 day programming with the option of 1, 2 or 3 heating periods. With models including, Mains, Battery, RF and WiFi variants, TPOne offers a solution for almost every application

### TP5001™

The TP5001 adds full heating schedule control to the features offered by the RET variants. With either 5/2 Day or 24 Hour scheduling the user can set two heating periods ensuring that the heating is either off or at a reduced temperature when away from home or asleep.

## Customer Benefits from replacing TRV's and controls

- ✓ Better comfort in every room
- ✓ Energy savings
- ✓ Replacing controls and TRV's when investing in a new boiler will improve the **boiler efficiency by up to 15%**.

## Electronic Room Thermostat

### RET1001

The RET1001 electronic room thermostat combines modern design with efficient heating control. Featuring a temperature adjustment dial with frost protect setting and LEDs to signal both power and heat demand, you can be assured of a simple, easy to use thermostat that meets the latest Building Regulations.

### RET2001

RET2001 is an electronic room thermostat featuring a large, backlit LCD Display. The temperature can be selected via the ring that circles the display. Similar to the dial version, a frost protection feature is included as well as a holiday mode with set-back temperature for energy saving whilst away.

### RX1-S

Employing secure digital radio communication, the Danfoss RX1-S one channel receiver communicates with a unit mounted up to 30M away. With its own unique digital identity code learnt by the receiver during commissioning, this thermostat is ideal for zoning applications.

# Time Switch and Programmers

The TS710 and FP720 are the latest generation of heating timers. Both feature a large, easy to read display with a straight-forward intuitive layout.

Current day, time and on/off period is shown in the large top section along with icons showing the status of the output channels. Both timers offer 1, 2 or 3 heating periods, whilst the FP720 also offers an additional channel for either time control of a hot water cylinder or 2nd heating zone.

# Motorised Control Valves

Motorised Valves work in conjunction with time controls and thermostats to control the flow of water in domestic central heating

systems. Designed and built for long term operation Danfoss 'H-series' valves are available in 2-port and 3-port versions in a wide range of sizes for copper pipework. Actuators for mid-position, diverter and 2-port on/off applications complete the range. Valve bodies and actuators may be purchased separately or in convenient sets.

087N6613	H53 - 22mm 3 port mid-position valve complete with actuator
087N6614	H53 - 22mm 3 port diverter valve complete with actuator
087N6609	HP22 - 22mm 2 port valve complete with HPA2 actuator
087N6587	HSA3 - 3 port mid-position valve actuator only
087N6579	HPA2 - 2 port valve actuator only

# Danfoss RAS-B<sup>2</sup>

**UNIQUE 2-in-1**  
Optimal temperature control & automatic hydraulic balancing built into one single product

The innovative design of the Danfoss RAS-B<sup>2</sup> features a differential pressure controller that ensures all radiators throughout the home get the heat they need throughout the year regardless of whether it is spring, autumn or winter.

# Danfoss RAS-C<sup>2</sup> and RAS-D<sup>2</sup>

**UNIQUE bi-directional valve**

Our valves feature the unique flow selectable adjuster helping ensure water flows through the valve in the right direction - the perfect solution to water hammer.

## Ras-C<sup>2</sup>

The RAS-C<sup>2</sup> sensor is packaged together with the innovative flow selectable RA-FS bi-directional valve body which can be mounted either vertically or horizontally in flow or return. If water hammer is experienced a patented flow selection device within the valve can be turned to reverse the water direction inside the valve without the need to drain down the system. A quick and easy solution to an otherwise expensive problem. The valves have a ½" BSP (R½") tail piece connection to the radiator and are available with 15mm, 10mm or 8mm compression fitting or an elbow with 15mm, 10mm push-fit fitting to connect the valve to the pipe work

## RAS-C<sup>2</sup>

013G6050	RAS-C <sup>2</sup> Combi Pack - 15mm

013G6025	RAS-C <sup>2</sup> +L/S + drain-off - 15mm Push-fit fitting

## Ras-D<sup>2</sup>

Available in white/chrome or all chrome the elegant RAS-D<sup>2</sup> radiator thermostats are ideal for designer radiators or towel rails. The valve bodies are reversible and bi-directional and include a flow-selectable feature to ensure trouble free installation without any risk of water hammer.

# Danfoss Installer App

## Your personal toolbox

Danfoss Installer App has been developed to provide assistance to installers working on both residential and commercial projects. With constant updates, you can always be sure the information provided will be accurate and up to date.

Use the mobile app to access service tools details and reduce the complexity of your work. All the information and tools you need carried in your pocket.

**Make your work easier.**

**Get the Danfoss Installer app now.**

## Danfoss DNA

Danfoss developed its first radiator thermostat prototype in 1943, and the first commercial model was launched in 1952. The selling price was equivalent to a weekly salary for an industrial worker. Sales did not take off until Danfoss was able to lower the price significantly in the 1960s. Today, Danfoss Thermostats have become a household brand and they are continuously being improved. The latest versions are fully connected and customers can control them from their smart phones. Danfoss has produced almost half a billion bellows, most of these have gone into radiator thermostats.
